SAAS CUSTOMER CHURN INTELLIGENCE

Personalised project report | Exploratory analysis of 50,000 customer records

50,000	916	1.83%	0
customer records	churned records	overall churn rate	duplicates / missing values reported

Project objective & methodology

This notebook explores SaaS customer churn using data cleaning, date conversion, data-quality checks, and descriptive summaries. Churned records are examined by plan tier, industry, country, payment status, account manager, and last-active year.

Key findings

Churn profile	916 of 50,000 customers are marked churned (1.83%); the churned subset includes 911 distinct company names.
Plan tier	Starter: 685 churned records (74.8% of churn); Pro: 174; Enterprise: 57.
Industries	Largest churn counts: EdTech (128), DevTools (121), Logistics (119), MarTech (113), and CyberSecurity (112).
Countries	Largest churn counts: Singapore (135), USA (126), France (125), Germany (115), and India (112).
Engagement	Churned customers average 24.8 active seats used versus 50.8 across all records. Mean feature adoption is 52.0% for churned customers.
Support & billing	Churned customers average 5.0 support tickets in 30 days (3.35 overall). Churned payment status: Active 513, Failed 294, Pending 109.
Last active	Of churned records, 742 have a last-active year of 2025 and 174 have a last-active year of 2026.

Recommendations

- **Improve Starter retention:** review onboarding, product fit, and early value delivery for Starter accounts.
- **Build engagement:** investigate low seat usage and feature adoption; provide targeted product guidance.
- **Address support and payment friction:** proactively review frequent support users and failed or pending payments.
- **Compare churn rates:** raw counts do not account for segment size; compare rates and validate patterns against non-churned customers.

Data note: This report summarises outputs recorded in the submitted notebook. Findings are descriptive and do not establish causation; compare segment rates before making operational decisions.
